

## **Our Science Curriculum Vision**

**“The important thing is not to stop questioning; curiosity has its own reason for existing” ~ Albert Einstein**

In our science lessons we ROCK!

- **Respectful** - We are aware that not everybody has the same opinions and ideas of how things work. Being respectful allows us to think freely and to be able to confidently make predictions and express our opinions.
- **Open minded** - Science requires an open mind. Our investigations allow the discovery of knowledge not previously known. Having an open mind allows us to investigate and learn new things as well as making objective observations.
- **Curious** - Being curious allows us to think in uncommon ways and discover things we did not previously know. Our curiosity makes us wonder why something behaves in a certain way and allows us to see all sorts of possibilities.
- **Kind** - Being kind is something that we need to do in all aspects of life. In our science lessons kindness allows good relationships. This means that we are comfortable to express ideas and opinions which is fundamental to science.

**In conclusion...We ROCK!**
